Major Findings of the Paper:

- New data show that an average malpractice case involving a retained surgical item (RSI) costs a hospital and physician well over half a million dollars in indemnity payouts and defense expenses. Defense spending on malpractice litigation is rising faster than indemnity spending. Nearly half of all lawsuits over sponges result in financial settlements, far more than for many other medical mistakes.

- Based on the new data, the estimated malpractice impact per case of an RSI in the U.S. annually is $94.50, roughly nine times the per-procedure cost of assistive counting technology.

- Medicare’s “no-pay rule” for the added cost of repairing the damage wreaked by gauze, laps and towels inadvertently left inside of patients has some hospitals simply absorbing those costs. An inflation-adjusted 2007 estimate from the Centers for Medicare and Medicaid Services (CMS) finds the added cost of a second surgery and follow-up care for a retained surgical item (RSI) is $77,512.

- State Medicaid payment is also withheld for the added care of a second surgery. More states are publicizing hospitals’ track records on medical errors. California has taken the next step: Since 2010 the state has fined hospitals a total of $1.8 million over 30 cases of retained sponges.

- Meanwhile, the Joint Commission is planning to publish a Sentinel Event Alert on retained surgical items, which for three years have been the most reported adverse event to the commission.
